

Eliminate The Guesswork!

We have the technology to find out why your well isn't performing. Why depend on guesswork, when our logs can *show you* what is happening? Now. In real time.

We have the world's smallest tools (7/8" O.D.) which can be used on pumping wells. We can run production logs on flowing wells. We can pump into wells and determine perforation efficiency, channeling or other mechanical problems. We can locate any lost circulation zones. Injectors or producers. Save time. Efficiently. Rapidly.

Smaller than a quarter!

We have been in business for a long time, servicing your wells with the best equipment and well-trained, experienced, and energetic personnel.

Dependable. Knowledgeable.

Annular well head with pressure control pack-off installed.

We can trace and log stimulation treatments using our patented Tagmaster® process (high-pressure injection of tracer material). *Know* where it went. We do multi-isotope tagging. We use *no-wash* materials. We don't contaminate any pumping equipment. Exclusive High Pressure. Multi-Isotopes.

Give us a call. Or visit our web site. Not a glitzy ad site, but chocked full of useful information and procedures.
